ABSTRACTED-PUB-NO: FR 2769210A

BASIC-ABSTRACT:

Composition for dyeing keratinic fibres comprises a carrier, at least one oxidation dye precursor, at least one first coupler selected from m-phenylenediamines of formula (I) and their acid-addition salts, at least one second coupler selected from m-aminophenols and m-diphenols, at least one 2-electron oxidoreductase enzyme and at least one substrate for the enzyme. In formula (I), R1 = H, 1-4C alkyl, 1-4C monohydroxyalkyl or 2-4C polyhydroxyalkyl; R2 and R3 = H, 1-4C alkyl, 1-4C

monohydroxyalkoxy or 2-4C polyhydroxyalkoxy; R4 = H, 1-4C alkoxy, 1-4C aminoalkoxy, 1-4C monohydroxyalkoxy, 2-4C polyhydroxyalkoxy or 2,4-diaminophenoxyalkoxy; provided that R1-R4 are not all H.

USE - Especially for dyeing human hair by applying the composition to the hair until the desired colour has developed, preferably where the composition is prepared just before use by mixing a composition containing the oxidation dye precursor(s) and couplers with a composition containing the enzyme and substrate.

ADVANTAGE - Uniform strong colours with good resistance to light, weather, perspiration and other hair treatments, e.g. shampooing and permanent waving, can be obtained.
